A snapshot, not a live page. Written on **November 8, 2026** for that moment and not updated since: what it says was current then. For today's numbers, your list and your tickets, open your dashboard, **MUSEDASH**, and its Dova's DREAMGLASS tab.

DJGuita — the Meta step, on one page

What to set up, why it should be in your name, and what happens right after. November 8, 2026.

Source → **Release** → **Listen** → **Learn** → **Make** (your viryl videos) → **Place** ← waiting on one thing: a Meta business account in your name → **Measure** → **Repeat**. Nothing is spent and nothing is released without your yes.

1 Why this, and why in your name

Every ad for your songs, whether intellijend places it or we place it ourselves, runs from a Meta business account. Today there is none in your name, so nothing can be connected and nothing can run. Making it **yours** means the three things that grow in value over time belong to you: the audience memory (the pixel remembers everyone who ever tapped through to your songs, release after release), the ad account's history (what worked, in which countries, at what cost), and your pages. Access for the people who help you is something you grant inside that account, and you can change or remove it at any time, in the same place.

2 What to set up (about 15 minutes, once)

1. At **business.facebook.com**, signed in as yourself: **Create a business portfolio**. Name it **YUKIYU RECORDS LLC** (or DJGuita), your name, the email you use for DJGuita.
2. **Settings → Accounts → Pages → Add**: bring your DJ Guita Facebook page into the portfolio.
3. **Settings → Accounts → Instagram accounts → Add**: log in to the DJGuita Instagram once.
4. **Settings → People → Add people**: Jeffrey's email, with **Full control**. That lets him do the technical settings (the ad account, the pixel, the beneficiary and payer fields, the intellijend connection) without ever needing your passwords. Everything he does shows in the account's activity, and the same screen lets you change or remove his access whenever you like.
5. **Billing**: ads are charged to the card on the ad account. Your card if you want to fund the ads directly; otherwise the first tests can run on Jeffrey's card. Your choice, just tell us which.

Then one message: “portfolio made”. Everything after that is done for you.

3 What happens right after

- The ad account and a pixel are created inside your portfolio (minutes).
- intellijend's five connection steps get finished, and your first cycle with them runs on your next release.
- A link page for each of your songs carries the pixel: when someone taps an ad and then taps *Listen on Spotify*, that tap is what Meta learns from, song after song. Those pages are yours too.
- Every week your dashboard shows what each ad cost per new listener, next to your Spotify numbers.

4 What their own guide taught us

- Spotify keeps a hidden score for every song and every artist. It rises with real listening in a short window, and it decides how much Spotify recommends you (Radio, Discover Weekly, Release Radar).
- Their method: a new song about every four weeks, most of the ad money in the first days, every ad sent to a link page, and the tap to Spotify as the signal.
- We run their method once from your account, read the results there, then run the same shape ourselves from your account, with no subscription.

5 Three small things from you

DO
The business portfolio above. It is the one thing everything else waits on.

OPEN
A TikTok account for DJGuita, the one platform you are not on yet (X can wait). Every post there gets the AI-made label, same as everywhere.

TELL US
The release date for *Demons In My Closet*, once Alex's master is ready, so the editor pitch goes in seven days ahead.
