A snapshot, not a live page. Written on **November 7, 2026** for that moment and not updated since: what it says was current then. For today's numbers, your list and your tickets, open your dashboard, **MUSEDASH**, and its Dova's DREAMGLASS tab.

DOVAHKIIN'S META-DREAMLINE · THE SHORT VERSION

The Chain, in one page

The highlights and the moves. The full plan is the Part II page, **DJGuita & the Alchemists II: The Chain**. Nothing gets released or spent without your yes.

Prepared for Olga by Jeffrey's engine crew · November 7, 2026

1 The goal, in four numbers

STREAMS PER LISTENER	PROGRAMMED SHARE	SAVES + ADDS	COST PER CLICK
1.5 → 2.0	70%	15 / 100	your bar
Brujeria today; the first target. "They came back."	Spotify's own playlists and radio carry Brujeria. Keep feeding it; judge ads by the other 30%.	per 100 listeners. What every post and ad asks for.	under $0.20–0.35 US/Europe; under $0.10 Mexico, Colombia, Spain.

Reliable income near $5,000 a month means well over a million streams a month. That climb comes from releases and the algorithm compounding; ads are the match, not the fuel.

2 The chain, as you have it now

> **Source** Suno, then Alex's played master → **Release** DistroKid, Made-with-AI label, editor pitch 7 days before → **Listen** Spotify for Artists into MUSEDASH (refreshed every 30 min) → **Learn** markets, saves, playlists → **Make** viryl → **Place** intellijend, from your own Meta account → **Measure** the Monday read → **Repeat** with your yes.

3 The highlights

- **viryl + intellijend are one company, two tools:** make, then place. intellijend runs ads from **your own** Meta account, so the data stays yours. Use them, learn one full cycle, then we run the same shape from your account with no subscription.
- **Your Meta connection is the one blocker.** Their guide read 0 of 5 steps on Nov 7: video; beneficiary and payer; share the Instagram profile with the ad account; intellijend in Events Manager's allowed domains; automatic adjustments off. Their $30 setup call is there if you want it.
- **Aura and Boost Collective do not fit.** Aura is a reseller (20% fee; about 110 non-programmed streams on Angel Face). Boost sells placement against Spotify's rules. Let anything paid run out while we measure it; do not renew.
- **Demons In My Closet: Alex's played master is what makes the song sellable.** A fully AI-made recording cannot be registered as yours; a human-performed one can. The 35% was a capped test deal on one song; your terms stay (no open-ended points, about 20% the ceiling). You want a cuatro part; that belongs in this step.
- **Your dashboard is live.** MUSEDASH re-renders every half hour and shows the date of its numbers. Next, your own Spotify exports flow in automatically (nothing touches your account, nothing is scraped). Keep the Made-with-AI label: Spotify carried Brujeria with it.

4 Your moves

1. Finish the Meta connection in intellijend (five steps).
2. Pick the Demons In My Closet release date; decide whether Angel Face gets re-cut first.
3. Tell us the day your first intellijend campaign goes live.
4. Say yes or no to three small tests from your own account beside theirs: $10–20 a day each, two weeks (Mexico + US Latino cities in Spanish; Brazil in Portuguese; Turkey + Poland wordless).
5. If not done yet: ASCAP or BMI as writer and publisher, and SoundExchange. Time Flies is on radio.
6. Keep releasing: the next song inside six weeks.

5 What runs without you

- MUSEDASH every 30 minutes, with its numbers' date in the stamp.
- Your Spotify exports read in; the public artist data daily.
- Videos cut from what works, in three reel types.
- The Monday read: streams, listeners, streams per listener, saves, adds, programmed share, top five countries, what each ad dollar bought.
- Next week's moves proposed to your phone. Spending and releasing wait for your yes.

The rules, still yours: your masters stay yours · nothing is released, posted as an ad, or spent without your yes · you do not have to be on camera · replace a vendor on a number, never on a hunch.
